

Tankless Water Heating Solutions

- · Heavy duty industrial cart options simplify moving heater to various locations
- 36-50 kW (122,800 170,600 BTUs)
- Variable Temp Heat Exchanger
- · Pressure Drop Advantage
- · NEMA 4 enclosure standard
- Independent Safeties
- . Heater ETL and cETL certified to UL and CSA Standards
- · Fan-cooled solid state relays
- Internal fusing (included) adds safety and permits single power connection

Standard Equipment

Keltech Portables - Tankless Water Heating Specifications

Certain Keltech, Inc. C2N Series Tankless Water Heaters can now be paired up with heavy duty industrial carts to make a portable solution for temporary or semi-permanent heating needs. The heater and cart combination (shipped separately) are designed to accommodate most light industrial fluid heating applications including booster applications with incoming process temperatures up to 130 degrees, demand is 36kW-50kW and total flow is <10 GPM up to 15 GPM. Standard units feature ≥ .75 GPM activation; lower flows available. NEMA 4X and explosion proof purge system options available. C2N-Series units are 3 Phase Delta 480V or 600V, 50/60 Hz.

Construction

Portable Cart

Keltech Portables feature a heavy-duty industrial cart for moving the heater into a temporary or semi-permanent location. Cart features push handle and forklift pockets to assist in moving heater from place to place. Carts are powder coated and constructed from welded steel tubing. All carts include 8" polyurethane casters.

Standard cart package includes lockable heater enclosure, tamper resistant inspection cover over control panel to prevent tampering by unauthorized personnel, cart push handle, forklift pockets, pigtail wire cable with plate and cable gland (shipped loose). Installer attaches heater to cart and provides final connections.

Deluxe cart package includes lockable heater enclosure, tamper resistant inspection cover over control panel to prevent tampering by unauthorized personnel, cart push handle, forklift pockets, Hubbell electrical connectors (shipped loose), welded tool box and truck brake to lock cart in place. Installer attaches heater to cart and provides final connections.

Temperature Controller

Keltech's PID temperature controller is more energy efficient and reliable than traditional microprocessors using staged elements. Power is infinitely variable, with no fixed inputs. The PID controller makes it possible to modulate the amount of power applied to the elements while also dispersing the required power evenly across all elements. This unique feature increases the product's life cycle. Temperature controller is concealed within a plastic, tamper resistant inspection cover.

Heating Element

Each heater features a heavy duty, low watt density, incoloy 800 sheathed resistive element. The Keltech design ensures greater protection, durability and resistance to scaling from hard water because water is only heated when flowing; this means sediment will not collect in the heat exchanger.

Solid State Relays

Fan-cooled solid state relays provides silent switching, which has a fast response and works in conjunction with the PID controller to infinitely modulate and add to the life of the heater. This feature makes the C2N Series ideal for high temperature recirculation loops.

Electrical

The C2N-Series requires only one service feed per unit. Includes internal fusing as standard. Internal fusing provides superior protection so the incoming circuit can be higher than 48 amps (NEC). Keltech protects each heating element with fusing.

Cabinet Enclosure

Page 1 of 6 12/6/2017 This information is subject to change without notice. Bradley_Keltech_Portables_C2NSeries

The standard cabinet enclosure is NEMA 4 rated and made from 16 gauge mild steel and powder coated with ANSI 61 gray, corrosive resistant paint. The optional NEMA 4X enclosures are for harsher environments and made from 16 gauge 304 stainless steel. The NEMA 4X enclosure can also be specified with 316 stainless steel (at additional price). Keltech Portable Heaters include tamper resistant latches with matching quarter-turn tools to inhibit unauthorized access.

Independent Safeties

The internal thermostat with auto reset high limit switch ensures that when the temperature limit is reached, the unit will power down a bank of elements; when the temperature drops back down to the set point, power is restored. The surface mounted bi-metal thermostat with manual reset acts as a fail-safe and must be manually reset before power can be restored to the elements if the temperature limit is exceeded.

Code Compliance and Certifications

Lead-Free

Products marked with the Lead-Free logo comply with the Safe Drinking Water Act (SDWA) requirements of a weighted average of less than 0.25% lead content on wetted surfaces of pipes, pipe fittings, plumbing fittings, and fixtures.

ETL listed to UL499

ETL listed to UL 50E

Intertek ETL listed to NFPA 496 (requires EXP2 Option)
cETL listed to CSA-C22.2 No. 88

Standard product selections contained within this document are third party CERTIFIED to NSF/ANSI 372 meeting the Lead-Free content requirement. Any product configured with custom options will be COMPLIANT with NSF/ANSI 372 meeting the Lead-Free content requirement.

Tankless Water Heating Solutions

Product Options

Fused Disconnect

Internal fused disconnect interlocks with enclosure door when energized, prohibiting access to a live cabinet. Select the FDS option for an additional level of safety and convenience at the heater location.

Ground Fault

Optional equipment protection ground fault senses leakage current to ground >1 Amp. In the event a fault is detected, this device will terminate the high voltage power supply to heating elements and disable operation of the unit. Fault status is communicated EXTERNALLY at the control interface. Personnel may also test the Ground Fault system and reset any nuisance trips without opening the cabinet.

Other Product Options

For additional heater options, installation accessories, and information on the carts reference the appropriate section at the end of this document.

Electrical Specifications for the Heater (3-Phase) C2N Pressure Drop Advantage

All internal fuses necessary for installation are included with the unit.

Sizing for the proper flow rate is important. If the temperature rise requirements exceed a single C2N model, consider using multiple C2N-Series units. Please contact your Keltech Representative for additional product information.

How to Size a Heater

| TION to OLEO a TIOATO | |
|---|---------------------|
| 1. Calculate Delta-T (Δ T). Set point temp - coldest ground water temp = Δ T | ΔT = |
| 2. Select kW required by using chart or formula below. Peak demand in GPM x Δ T x .1465 = kW | kW = |
| 3. Confirm voltage and phase available on site. | Voltage and Phase = |
| 4. Confirm minimum flow. | Minimum Flow = |
